Dear Xuwen Zhang,

Thank you for submitting your proposal "*SuperSenseDoctor*" to the UbiComp/ISWC 2026 Student Challenge.

We are pleased to invite your team to proceed to the formal paper submission stage. Below is our initial feedback on your proposal. Please note that this feedback is intended to help you improve the quality of your submission and increase your chances of acceptance (it does not guarantee that the final paper will be accepted, as all submissions will go through a full review process).

This is an ambitious and well-organized proposal, and the three-agent design with a Nurse rule engine, a Diagnosis reasoner, and a Report agent is clean and easy to follow. The main risk is feasibility, since fusing WiFi BFI, mmWave radar, and infrared thermal is hard, so for the next version we would suggest scoping down to what the authors could really demonstrate and reporting some preliminary signal-quality or accuracy results. The abstract currently reads a little like a technical report, so it would help to step back and make the research contribution stand out, meaning what others can learn from this beyond the specific system that was built.

To submit your paper, please use the PCS system (<https://new.precisionconference.com/submissions>) and select the track: UbiComp/ISWC 2026 Student Competition and Challenges.

The submission deadline has been extended to July 15, 2026 (11:59 pm AOE). The short paper should be no more than 4 pages (excluding references), formatted using the ACM SIGCHI 2-column conference template, and anonymized for blind review.

We look forward to your submission and wish your team the best of luck. Feel free to reach out if you have any questions.

Best regards,

The Student Challenge Organizing Committee

UbiComp/ISWC 2026
